DETAILED ACTION

1. This Office Action is responsive to the Amendment filed on 8/21/07. Accordingly, claims 1-3, 6-13 and 16-19 are currently pending; and claims 4, 5, 14 and 15 are canceled.

REASONS FOR ALLOWANCE

2. Claims 1-3, 6-13 and 16-19 are allowed.

3. The following is an examiner's statement of reasons for allowance:

-Regarding independent claim 1, none of prior art of record teaches or suggests a DTX bit processing method, as claimed. Takano et al teaches the claimed method except he fails to teach a procedure of mapping a symbol to a predetermined mapping point to an origin of an IQ plane when at least one bit of the symbol is a DTX bit. In Takano et al, when at least one bit of a symbol is a DTX bit, the symbol is mapped to a point in a predetermined region around, but not including the origin of the IQ plane. It would not have been obvious for one skilled in the art to implement Takano et al in view of other prior art for leading such the implementation to the claimed invention.

-Regarding independent claim 10, none of prior art of record teaches or suggests a transmitter, as claimed. Willengger in view of Takano et al teach the claimed transmitter except they fail to teach that the transmitter comprises a procedure of mapping a symbol to a predetermined mapping point to an origin of an IQ plane when at least one bit of the symbol is a DTX bit. In Willengger in view of Takano et al, when at least one bit of a symbol is a DTX bit, the symbol is mapped to a point in a predetermined region around, but not including the origin of the IQ plane. It would not have been obvious for one skilled in the art to implement either one

or combination of Willengger and Takano et al in view of other prior art for leading such the implementation to the claimed invention.

-Regarding independent claim 11, none of prior art of record teaches or suggests a DTX bit processing system, as claimed. Takano et al teaches the claimed system except he fails to teach means of mapping a symbol to a predetermined mapping point to an origin of an IQ plane when at least one bit of the symbol is a DTX bit. In Takano et al, when at least one bit of a symbol is a DTX bit, the symbol is mapped to a point in a predetermined region around, but not including the origin of the IQ plane. It would not have been obvious for one skilled in the art to implement Takano et al in view of other prior art for leading such the implementation to the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
